outright rebellion. Despite a great deal of grumbling and non-compliance, they still tacitly recognized Maibu as chief.

One of Maibu's main prerogatives was his talking function. He alone had the role of exhorter of the people. Other men would be "ashamed," he said, to speak so. Most of Maibu's speeches were delivered at night in the men's circle or before work started in the morning. The attitude of his audience ranged from interest to bored indifference and outright ridicule. One morning Maibu lay in his hammock and shouted for everyone to go out to gather fruit. The initial response to this was a shout from some of the houses, telling him to be quiet. Later some people drifted out of the village carrying baskets, and still later others followed, grumbling that they were being driven from the village. This was a common complaint. Because of the tone in which it was said, Quain thought at first that they were actually being exiled.

The chief had no symbols of office outside of the above prerogatives; yet a deference of sorts was shown him. When Maibu entered the men's circle or Quain's house, someone always got up to give him a seat. Tobacco was usually supplied him, and the donor would roll the cigarette and light it before making the presentation. Even the men who told Quain that Maibu was not a "real chief" made these gifts. Maibu himself did not hesitate to send someone across the village through the rain to fetch something. These favors were usually performed by his kinsmen and co-residents, although occasionally more distant persons obliged. On the other hand, Maibu was expected to be generous towards all the other Trumaí. Nearly everything that Quain gave him passed to other hands. Maibu did not even have a bow of his own.

Maibu's poverty was attributable in part to his heavy gift obligations and in part to the fact that he had no garden. He said to Quain that he did not plant because he was a chief. However, he was not completely a non-producer. He went fishing, joined in collective labor, and helped his wife in gathering. At none of these tasks did he occupy himself strenuously. The only articles that he manufactured were arrows and spears. He thus made no trade commodities, relying on others, principally his co-residents, for all his artifacts and food. On most days he did little except talk, sleep, and philander with the unmarried women.

Inheritance of the chieftaincy was nominally patrilineal. Maibu, however, was the son of the daughter of the Trumaí chief whom von den Steinen had met, indicating that the office can pass matrilineally if there are no male heirs available. (Maibu's brother's son, Jawaku, adopted by Maibu through the levirate, was to have been the next Trumaí chief.) But the Trumaí chief reported by Galvão nine years later was Aloari, who was only a distant relative of Maibu.[8] What happened in the years between 1938 and 1947 is not known, but it is apparent that

[8] This information was received verbally from Dr. Eduardo Galvão.

Diagnosis and Treatment of Disease

Illness was believed to be caused primarily by witchcraft and, secondarily, by the breaking of a taboo or by contagion. Headaches, bloated stomach (*pihl*) and stomach aches were among the common symptoms of bewitchment. The tremendous fear of black magic probably added greatly to the severity of these afflictions. During Quain's stay the women appeared to complain more of sorcery as a cause of their illnesses than did the men, but this self-diagnosis was not always accepted.

Trumaí concepts regarding contagion were generally loose, and they often fused with witchcraft beliefs. Contagion was acknowledged to be a possible cause of illness, but if death followed, it would in all probability be laid to sorcery. The Trumaí knew that epidemics of pulmonary diseases were associated with the coming of white men, and they were especially worried that when the rainy season arrived Quain would give them coughs and fevers. Indeed, one night when Quain complained of illness and retired to his hammock with a headache, this eventuality was vigorously discussed.

The Trumaí called such a threat *tun*, a word that can be translated only as a malignant influence causing disease. *Tun* was said to exist around sick people or in places where there was known to be danger of contamination. Thus, when several of the people of Jakwanari's household were sick, everyone avoided the house, for it was full of *tun*. Aloari said that the waterfront, also, was full of *tun*. He preferred to bathe from a pottery vessel outside his house. Ringworm, however, was known to be caused by natural means.

The word *okei*, while referring to sorcery under certain conditions, was also a general term for medicinal preparations. Thus, *okei* of various kinds were used in different stages of the life crisis rituals and also in the treatment of various ailments. Roots were extensively used for medicinal purposes. Maibu rubbed his wife's head with the extract of a root (*ipox*) when she had a headache. Another root (*murukuyu*) supplied the basic ingredient for eye drops, and still another was prescribed for ringworm.

The Trumaí were subject to severe boils which were treated by piercing. This was a woman's specialty, and it was usually done by the wife or a close relative of the afflicted person. All other curing, both secular and supernatural, was done by men. Herbal medicines were used exclusively for such ailments as ringworm, but most cures involved both botanical and supernatural means used in conjunction.

Illness was treated by both individual curers and group ceremonies. The practice of individual shamanistic curing, known as *jau'kath*, had much in common with similar arts throughout South America. The main techniques employed were tobacco smoke and sucking. Great

1:Murphy and Quain E-4,5 (1938) 1955
SP23 Trumai SP23

clouds of tobacco smoke were first blown over the affected area by the curer who then, with noisy inhalations, sucked that part of the body in which the ailment appeared to be localized. Insofar as Quain was able to determine, no foreign objects were "extracted," and he was not given any explanation as to why the treatment worked.

Knowledge of curing was widespread among the men. All the men knew how to use botanicals, and over half, all said to have been taught by Matiwana, knew the art of *jau'kath*. Men cured their wives, children, or other close blood relatives. When Aloari was treating his son's ringworm he was asked by Quain whether he would also treat a young boy who was only indirectly related. Aloari refused because the boy had closer kinsmen who could perform this act. Kayaru developed a swollen breast, and it was Yanahi, her sister's son, who performed *jau'kath* on it. All men treated the members of their biological families with medicines, but those who did not know the shamanistic cure relied on a practitioner from outside the immediate family.

Matiwana treated his son Yati without recompense, but when his daughter's husband became ill, the latter paid him for the cure with a pot. The kinship ties by which curing was free to certain relatives probably corresponded closely to the pattern of gift-giving obligations. Payments for medical treatment were called *okei pop* (medicine gift). Quain was usually given small payments for the many cures he performed for the Trumaí. In no case could it be said that any curer derived a significant income from his services.

Group Curing Ceremony

The only time that Quain witnessed the group curing ceremony (*kevere*) was on an occasion two weeks after his arrival. He noted the formal aspects carefully, but he was unable to ascertain their meanings, since his command of the language at that time was so meagre.

Maibu's wife, Matavitsa, was sick and wasted when Quain arrived in the village. Her husband had been treating her for some time by the shamanistic means of tobacco smoke and sucking, but with little success. It was decided to hold a ceremonial cure, although shamanistic techniques were not ruled out. Nearly all the adult men of the village gathered in Maibu's house for the ritual, which lasted for three hours. No women were admitted, and the door was kept closed. The *kevere* was strictly prohibited to females, and the men would not even talk of it in their presence. The women seemed to regard Quain's status as doubtful, for Maibu's sister told him that he would die if he entered. He refused to be dissuaded, and upon entering was motioned to a seat.

The men were ranged in a broad semi-circle along the side of the house opposite the sick woman's hammock. Matiwana, who was in charge of

the banks, while men crowded into a canoe. The reptile was located, but instead of the one-foot diameter that it was at first said to have, it turned out to be only three inches thick. But, as Quain laconically observed, it was hungry. The men shouted at Jawaku to jump in the water and grab it.

The boy approached the reptile cautiously and with obvious fear. The anaconda, aroused, slithered through the water to the other side of the lagoon. Jawaku's unwillingness to fight was now apparent. There were shouts that he was frightened. These goads temporarily overcame his reluctance, and he waded through the water and grabbed the snake around the middle, lifting it out of the water. The anaconda began throwing its coils, while striking at the boy. In a panic, Jawaku stumbled blindly for the shore, tripped over a log, and released his hold on the snake. All the men shouted, "He's afraid!" as the crestfallen boy dragged himself out of the water and silently walked home.

That night, Maibu made a lengthy speech in which he absolved himself from any responsibility for Jawaku's cowardice. The next day another reptile was sighted, but Jawaku did not even bother to look at it.

On the other hand, Autsuki measured up to what was expected of him, and thus was able to continue the ritual that marked his maturation. Immediately upon the successful outcome of his struggle with an anaconda, he went to his house. He had now entered the seclusion phase of his puberty rites. Tun, his mother's brother, who was acting as next of kin, built a partition screening him off from the rest of the house. He was allowed nothing to eat but a medicinal preparation called *wyryx*, and he could leave his confinement to defecate only when everyone was asleep.

The seclusion period was to last until the ear-piercing festival which was to be held several months later, but Autsuki was cheerful about it. In accordance with normal practice, he had his arms scraped shortly after he entered confinement, and he was also given the adult tonsure.

There remained only one more step in the cycle of initiation rites: initiation into the shamanistic art of curing. Completion of this final phase was necessary for full participation in the men's circle and for the privilege of smoking tobacco.[3] All of the uninitiated Trumaí youths knew how to smoke and occasionally did so, but the adults referred to this as "lying smoking." In order to "really" smoke it was necessary to have a ceremony performed by Matiwana. Exactly when this occurred is open to question, but ideally it was supposed to follow the final seclusion and ear-piercing. Aloari had not yet had the ceremony performed, although he was married and had a child. In his own words, he was still "too young." Aloari was evidently equating maturation with the puberty rites.

[3] Oberg (1953, p. 60) reports that uninitiated men may not smoke among the Kamayurá, either.

SP23 Trumai SP23

Changes in status and expected behavior were connected with the transition to manhood, and new modes of participation in the culture were open to the young man. It is necessary, however, to differentiate between the transition consequent upon increased age and that which resulted specifically from passage through the life crisis rites. Ideally, such a distinction should not have existed, as the achievement of physical maturity should have been heralded by the socio — religious observances. But there were two young married men, Yanahi and Aloari, who had not completed the ritual — the former because of disinclination, the latter due to the delay caused by his captivity among the Yuruna. Aloari, although both vocal and aggressive, and having the men's haircut, was definitely not one of the men's group yet. His smoking was only of the "lying" kind. He still needed the ritual admittance to the smoking group. Yanahi, on the other hand, still had the youthful haircut, but, for unknown reasons, was already a full-fledged member of the men's group. He was frequently seen with the adolescent boys, however, and his activities were characterized by a youthful lack of gravity. His history shows that there was no sudden break with boyhood among the Trumaí. The puberty rites were spread over a long enough time to allow a slow incorporation into the adult world.

Upon reaching man's estate, the young man became an integral part of the household and village economies. To be sure, property attitudes had been developed early, but he now had a greater opportunity to express them, inasmuch as he was able to participate in the upper Xingú trade system and thus accumulate more personal possessions. His entrance into the men's circle gave him a larger voice in community affairs, but at the same time it involved him in many village squabbles, which were intensified by his search for sexual partners or a wife. Also, among his added responsibilities was the defense of the village.

In short, the status of the newly arrived man brought greater economic independence and a fuller participation in the social and ceremonial life of the community. In return for his heightened importance he was expected to act with sobriety and self-reliance, to show courage and fortitude, and to be more aggressive in asserting his new rights and prerogatives. This last was largely a matter of degree, for Quain had been impressed at the extent to which children asserted themselves and shared the mannerisms and attitudes of adults.

Female Puberty

The only data available on female puberty observances concern the first menses (*wasipanes*), when the girl is confined for a period during which she wears her hair over her face. Rodrigues Ferreira, in commenting on a Trumaí girl in seclusion, states that she must remain in her

/195 cont./

301 a head-net, above which they pointed upwards, sticking out on
237 all sides, and into which they could be bent back to protect them
415 after use. There was also a dainty little pot with a notched edge,
283 and red cotton strings which several Trumaí wore around the waist
276 or around the lower leg. There was some tobacco wrapped in
415 green leaves; on the beach there were also a few gourd vessels
272 containing insipid, pasty mingau[1] which was just as poor as the mandioca bread.

142 There was no indication that the Trumaí are on a higher level than the Bakaïrí; as far as their body structure is concerned, I did not notice anything peculiar during the brief encounter; in size they did not differ from the Bakaïrí and Kustenaú. The fact that they appeared so ugly in the face may have been due to the
291 disfigurement. They protect themselves against penetrating in-
825 sects in the strangest and most primitive manner -- präputium filo gossypii rubro ante glandem farciminis instar constringunt /the foreskin is bound with red cotton thread in front of the glans in such a manner as to look like farcy/. This arrangement may also be useful in the water against the prying candiru fish.

123 What now? A closer study of the Trumaí is, of course, inconceivable. War has been declared; we have no choice but to disappear from the scene of action as quickly as possible. We are forced to forego all further soundings and measurements and bid the Kulisëu farewell. We can still draw one advantage from the awkward situation, however. Since we have departed this far from the path of virtue, we need not have any scruples about transgressing still more. After all, we did not get back our fine ax (two canoes capsized and sank when the Trumaí fled to land). Why should we hesitate to exchange the most warped and defective canoes for those abandoned there, which are well built and excellently dried out?

501 /196/ Several men are sent out and return with three canoes
171 and a few oars, which do not differ from those of the Bakaïrí; one of them is for Valentin and me, a second will be pulled
000 along as a reserve, the third goes to the sergeant. Meanwhile Castro's craft has also been brought home.
